Browsers by Version - Help Card

Column Definitions

Browser - A program used to locate and view web pages. These include Netscape, Microsoft Internet Explorer,
Opera and others.

Version - The specific version of the browser.

Hits - Each file requested by a visitor registers as a hit. There can be several hits on each page. While the volume of
hits reflects the amount of server traffic, it is not an accurate reflection of the number of pages viewed.

Visits - Number of visits to this page. A visit is a series of actions that begins when a visitor views the first page from
the server, and ends when the visitor leaves the site or remains idle beyond the idle-time limit. The default idle-time
limit is thirty minutes. This time limit can be changed by the system administrator.

Report Descriptions

This information can help you decide which technology to implement on your site. You can determine whether the
majority of your visitors are ready to benefit from the latest technologies (DHTML, Flash, etc.) available with the most
recent versions of the main browsers.
